

Why Your Information is Safe and Secure with Weave

We maintain and monitor strong Information Security Policy

Our policies are designed to protect restricted, confidential or sensitive data from loss to avoid adversely impacting our customers. The protection of data in scope is a critical business requirement. Our policies are continually monitored and reviewed quarterly by the Weave Security Team to make sure we are up to date with our systems and the environment.

Your data is encrypted at rest and in transit

Weave utilizes Amazon EBS encryption, and encrypts the following data:

- ✓ **Data at rest inside the volume**
- ✓ **All data moving between the volume and the instance**
- ✓ **All snapshots created from the volume**

Encryption occurs on the servers, providing encryption of data-in-transit from EC2 instances to EBS storage.

Regular monitoring and testing of networks

Automated and human monitoring of servers, firewall configurations, log files, backups, security patches, penetration testing and more.

Physical security on the cloud servers

AWS's data centers are state of the art, utilizing innovative architectural and engineering approaches. Data centers are housed in nondescript facilities. Physical access is strictly controlled both at the perimeter and at building entrances by professional security staff utilizing video surveillance, intrusion detection systems, and other electronic means.

Daily backups are housed in multiple facilities within the AWS cloud

Weave employs multiple layers of redundancy and backups of your data at multiple data centers within AWS cloud.

Your Trusted Weave Team

All Weave employees have been thoroughly vetted with background checks, and are required to take Security Awareness Training and recertify annually. A strong privacy policy ensures you that there is no mining of your data for advertising purposes or 3rd party use.
